

## You Can Reduce the Risk of Drownings Worldwide

Introducing OneUp, the first portable inner tube that inflates on contact with water in the shape of a life preserver.

Oneup will change our concept about nautic security

Drowning is one of the **10 leading causes of death** in the world. That represents **370 000 people**. More than half of these deaths involve less than 25 years ... OneUp is more than an object, it is a solution to **SAVE LIVES**.

OneUp is lightweight compact and reusable

An original packaging no bigger than a can of soda (**6,8 inches**). A nomadic and lightweight format (**370 g**), which supports a weight of **150 kg**.

You can carry it everywhere : backpack, glove box, kit ... Its size, 20 times smaller than a classic buoy, allows a launched accurately without being impacted by wind or strong currents.

The opening of the buoy is done by a system using a salt capsule that liquefies and releases CO2 from its bottle. Once used, simply replace the **salt / CO2 kit** to fold the buoy and slide it into its case.

For everybody, everywhere..

Vacations, swimming-pool, nautic sports,...  
Outings at sea or in freshwater..

OneUp allows everyone to have the means to act in case of a problem and to feel **serene and safe** when going out to the water's edge.
